You have to do the following problems from the book. Your answers should be presented in neatly printed pages. Handwritten assignments will be accepted only if it extremely neat. If Excel printouts are needed, please make sure those are brief. For example, there is no point in submitting pages of data. It will be enough if you just include the few Excel printouts which show the work that you have done. For each problem you should write in detail what you are doing. For example, if you are doing a hypothesis test make sure you include all the steps involved in such tests. If you are using the TI-83 plus or any of the computer software to get to your answers, please write down all the steps and commands that led you to your answer.

For this assignment you should do all the problems independently and should not be discussing those with anybody else. The assignments should not show any sign of collaboration. If I find evidence that you have collaborated, I shall fail all the parties involved in such collaboration or may take more severe disciplinary measures.

If clarification is needed or you are stuck on a particular problem, you are welcome to ask me about it but, I repeat, do not discuss your work with anybody else in the class.

Assigned Problems:
